David Leavitt

Software Developer
Orem, Utah

Summary

Over the past few years I have gained valuable experience and training from trained industry professionals and my own real world experience. I have learned how to manage software development projects, work with colleagues in both leadership and non-leadership roles, and to work well with customers. I have managed time and resources for projects to ensure that we hit contracted targets. I have had experience planning and creating user interface designs and interactions with various industry tools. Finally I have become proficient in all aspects of software development from user experience to back end coding and data storage.

Throughout my career, I have tried to gain the experience necessary to enable me to analyze business and industry needs, then design and execute a plan to build tools that fill those needs. Not just filling the need, but doing it in a way that is easy, intuitive and makes people wonder how they ever succeeded without those tools. That has always been the direction I have taken throughout my career. I feel that my skills and positive attitude will be an asset to any company.
